Overview

The Right of Way Division at TxDOT is automating the utility and leasing process with the implementation of RULIS, the Right of Way Utility and Leasing Information System. RULIS makes it possible for utility owners and consultants to manage utility permit applications and leasing in a modern, web-based system. The allocation of these roles is driven by the specific requirements of each business operation.

- **Multiple Security Roles** can be assigned to an internal individual.
- **Requests to Add/Update Security Roles** are reviewed by the employee's supervisor and, in some cases, Lead Champion and the Utility Portfolio section, prior to approval.
- **Security Roles** are designated for districts or divisions
- **Security Roles** available to non-TXDOT staff are referred to as external roles.

New security roles and updates to existing security roles will be made as new **RULIS** functionality is deployed.

User Role	District/Division	Capabilities	Additional Information
